DETAILED ACTION

1. The text of those sections of Title 35,U.S.Code not included in this section can be found in the prior office action.

2. The prior office actions are incorporated herein by reference. In particular, the observations with respect to claim language, and response to previously presented arguments.

- Claims 1, 8, 10, 22, and 24 have been amended.
- Claims 1-10, 12, 13, and 15-25 have been considered.
- 3. Examiner withdraws rejection of claims 1, 8, 10, 22, and 24 under 35 U.S.C 112-second paragraphs due to correction by the applicant. As well as rejections under 35 U.S.C. 112 first paragraph regarding claims 1, 8, 10, 22, and 24.

Continued Examination Under 37 CFR 1.114

4. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4 November 2003 has been entered.

Response to Arguments

5. Applicant's arguments filed 4 November 2003 have been fully considered but they are not persuasive and most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Page 2

Application/Control Number: 09/728,297 Page 3

Art Unit: 3621

7. Claims15-20, and 24-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 8. In independent claim 15, the "encoding level that varies..." phrase makes the claim indefinite and unclear in that neither means nor interrelationship of means nor method steps are set forth in the claim in order to achieve the desired results expressed in the "encoding level that varies..." phrase.
- 9. Dependent claims 16-20 and 24-25 are unclear in that they depend from an unclear independent claim. Clarification is requested.

Claim Rejections - 35 USC § 101

10. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title.

11. Claims 1-10, 12, 13, and 15-25 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As an initial matter, the United States Constitution under Art. I, §8, cl. 8 gave Congress the power to "[p]romote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries". In carrying out this power, Congress authorized under 35 U.S.C. §101 a grant of a patent to "[w]hoever invents or discovers any new and useful process, machine, manufacture, or composition or matter, or any new and useful improvement thereof." Therefore, a fundamental premise is that a patent is a statutorily created vehicle for Congress to confer an exclusive right to the inventors for "inventions" that promote the progress of "science and the useful arts". The phrase "technological arts" has been created and used by the courts to offer another view of the term "useful arts". See *In re Musgrave*, 167 USPQ (BNA) 280 (CCPA 1970). Hence, the first test of whether an invention is eligible for a patent is to determine if the invention is within the "technological arts".

Further, despite the express language of §101, several judicially created exceptions have been established to exclude certain subject matter as being patentable subject matter covered by §101. These exceptions include "laws of nature", "natural phenomena", and "abstract ideas". See *Diamond v. Diehr*, 450, U.S. 175, 185, 209 USPQ (BNA) 1, 7 (1981). However, courts have found that even if an invention incorporates abstract ideas, such as mathematical algorithms, the invention may nevertheless be statutory subject matter if the invention as a whole produces a "useful, concrete and tangible result." See *State Street Bank & Trust Co. v. Signature Financial Group, Inc.* 149 F.3d 1368, 1973, 47 USPQ2d (BNA) 1596 (Fed. Cir. 1998).

This "two prong" test was evident when the Court of Customs and Patent Appeals (CCPA) decided an appeal from the Board of Patent Appeals and Interferences (BPAI). See *In re Toma*, 197 USPQ (BNA) 852 (CCPA 1978). In *Toma*, the court held that the recited mathematical algorithm did not render the claim as a whole non-statutory using the Freeman-Walter-Abele test as applied to *Gottschalk*

Art Unit: 3621

v. Benson, 409 U.S. 63, 175 USPQ (BNA) 673 (1972). Additionally, the court decided separately on the issue of the "technological arts". The court developed a "technological arts" analysis:

The "technological" or "useful" arts inquiry must focus on whether the claimed subject matter...is statutory, not on whether the product of the claimed subject matter...is statutory, not on whether the prior art which the claimed subject matter purports to replace...is statutory, and not on whether the claimed subject matter is presently perceived to be an improvement over the prior art, e.g., whether it "enhances" the operation of a machine. *In re Toma* at 857.

In *Toma*, the claimed invention was a computer program for translating a source human language (e.g., Russian) into a target human language (e.g., English). The court found that the claimed computer implemented process was within the "technological art" because the claimed invention was an operation being performed by a computer within a computer.

The decision in State Street Bank & Trust Co. v. Signature Financial Group, Inc. never addressed this prong of the test. In State Street Bank & Trust Co., the court found that the "mathematical exception" using the Freeman-Walter-Abele test has little, if any, application to determining the presence of statutory subject matter but rather, statutory subject matter should be based on whether the operation produces a "useful, concrete and tangible result". See State Street Bank & Trust Co. at 1374. Furthermore, the court found that there was no "business method exception" since the court decisions that purported to create such exceptions were based on novelty or lack of enablement issues and not on statutory grounds. Therefore, the court held that "[w]hether the patent's claims are too broad to be patentable is not to be judged under §101, but rather under §§102, 103 and 112." See State Street Bank & Trust Co. at 1377. Both of these analysis goes towards whether the claimed invention is non-statutory because of the presence of an abstract idea. Indeed, State Street abolished the Freeman-Walter-Abele test used in Toma. However, State Street never addressed the second part of the analysis, i.e., the "technological arts" test established in Toma because the invention in State Street (i.e., a computerized system for determining the year-end income, expense, and capital gain or loss for the portfolio) was already determined to be within the technological arts under the Toma test. This dichotomy has been recently acknowledged by the Board of Patent Appeals and Interferences (BPAI) in affirming a §101 rejection finding the claimed invention to be non-statutory. See Ex parte Bowman, 61 USPQ2d (BNA) 1669 (BdPatApp&Int 2001).

Application/Control Number: 09/728,297

Art Unit: 3621

12. In the present application, the claims, as presently claimed and best understood were considered in light of the new "Examination Guidelines for Computer-Related Inventions" above and were found to be non-statutory. Discussion of the analysis of the claims under the guidelines follows.

- 13. As per claims 1, 8, 9, 10, and 15, the claims are directed towards implementing a method of hiding postage information within an image by using halftone imaging. The claims in question here are none statuary because they can recite a method that can be achieved by other means other than computer and none-electronically by way of mathematical ways. There is no discussion of any electronic or computer implementations of such claims have been mentioned within the claimed invention and claim language. Thus, claims 1, 8, 9, 10, and 15are deemed to be non-statutory.
- 14. Dependent claims 2-7, 12-13, and 16-25 are non-statuary in that they depend from a non-statuary independent claim. Clarification is requested.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 15. Claim 10 is rejected under 35 U.S.C. 102(e) as being unpatentable over U.S. Patent no. 5,871,288 to Fedrick W. Ryan, Jr. et al.

As per claim 10, Ryan clearly discloses a method of generating a payment indicium with a printer of a particular type, comprising:

identifying the type of the printer;

setting the printer to a printing resolution based on the identified type of the printer; and

Page 5

Application/Control Number: 09/728,297 Page 6

Art Unit: 3621

printing a payment indicium containing embedded payment information on a printing surface with the printer set to the selected printing resolution (See Ryan abstract and figure 3 and associated text and column 2, lines 9-57, column 3, lines 29-51, and column 4, lines 1-68).

Examiner has pointed out particular references contained in the prior arts of record in the body of this action for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant, in preparing the response, to consider fully the entire references as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior arts or disclosed by the examiner.

As per claim s12-13 and 22-23, same rejection rational as mentioned above is applied as well as they being dependent on a rejected independent claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 16. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent no. 5,075,862 to Terrence M. Doeberl et al.
- 17. As per claim 9, Doeberl clearly discloses the a method of extracting payment information from a payment indicium, comprising:
 - decoding the extracted digital token to produce a decoded message (See Doeberl abstract, figures 2-9 and associated text, column 1, lines 65-68, column 2, lines 1-16, column 3, lines 11-45, column 4, lines 47-55, and column 5, lines 7-65); and

Application/Control Number: 09/728,297

Art Unit: 3621

Page 7

extracting from the decoded message payment information encoded in the payment indicium
 (See Doeberl abstract, figures 2-9 and associated text, column 1, lines 65-68, column 2, lines
 1-16, column 3, lines 11-45, column 4, lines 47-55, and column 5, lines 7-65);

What is not explicit in Doeberl is the method of extraction of indicium from a graphical representation.

 extracting a digital token from a payment indicium based upon a comparison of the payment indicium and a base image. However Doeberl clearly teaches the encoding and extraction of data within a graphical representation. It is clearly thought that one can use an overlay to detect the differences between the original graphics and the manipulated graphics ad to extract the difference as to detect the information hidden in the graphical representation. Therefore, it would have been obvious to one having ordinary skill in the art at the time the current invention was made to combine the teachings of Doeberl and extend it to the other methods of graphical manipulation such as halftone image processing to achieve a superior method of obfuscating certain data within a graphical representation of a secure indicium. In addition, it is well known within the art to use comparison of different states of an image to extract hidden information from within the manipulated image such as an image embedded with a digital token by way of halftone watermarking.

Examiner has pointed out particular references contained in the prior arts of record in the body of this action for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant, in preparing the response, to consider fully the entire references as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior arts or disclosed by the examiner.

Conclusion

- 18. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 19. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

"Application/Control Number: 09/728,297

Art Unit: 3621

the advisory action. In no event, however, will the statutory period for reply expire later than SIX

MONTHS from the date of this final action.

20. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kambiz Abdi whose telephone number is (703) 305-3364. The examiner can normally be

reached on 9:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

James P. Trammell can be reached on (703) 305-9768.

Any inquiry of a general nature or relating to the status of this application or proceeding should be

directed to the Receptionist whose telephone number is (703)308-1113.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, D.C. 20231
